

Art and Science Combine to Give You the Best

Smile Possible

By Meredith Knight

A wise man once said, “Find a job you love, and you’ll never work a day in your life.” Talk to Dr. Farid Noie of “The Unicare Center for Cosmetic and Implant Dentistry” for five minutes, and you’ll realize that’s exactly what he’s done. He’s combined his natural-born talents and his life-long passions to select a career where he can utilize both for the benefit of those around him. That career is Implant and cosmetic dentistry which he describes as “part science, part art”.

As long as he can remember Dr. Farid Noie was attracted to shapes and forms and was naturally gifted in math. A career in engineering seemed like a perfect fit for him and for a while it was. But it was missing the human element. If he was going to dedicate his life to something, he wanted it to be a pursuit that affected people; that improved their lives.

Although extremely successful as an engineer [with a U.S. patent to his credit](#), he didn’t find the satisfaction there he thought he would. He started talking to a couple of dentist friends and decided this was the direction he wanted to take, to apply the principles he’d learned as an engineer in ways that would benefit [people more directly](#). So he studied to become a dentist and opened his [Private practice over a decade ago](#), and [has since](#) furthered his education to become a renowned Surgeon and Implant specialist. “I learned during my years as an engineer that anything beautiful [had](#) to be functional [or](#)

it would not be of any real benefit to anyone?” Dr. Noie explained. “I understood the muscular and skeletal systems enough to know that, when a patient loses teeth, they eventually lose the bone and gums around them. Giving someone a set of dentures or a partial plate and telling them they’re as good as new, just doesn’t cut it. They aren’t.”

In the field of Cosmetics, Dr. Noie has been perfecting his art of smile design and has been doing smile makeovers for thousands of his patients. In the majority of cases, he designs a beautiful smile by using custom made, hand crafted veneers, thin porcelain layers that are put on top of a tooth with minimal or no tooth removal.

In more complex cases, for patients that have lost one or more of their teeth and are suffering from diminished functionality or he is able to do full mouth rehabilitation through Dental Implants, by balancing the symmetry of the face and enhancing lip structure to create the perfect smile for his patients. “It’s gratifying to be able to provide someone with a beautiful smile or a perfect bite, as good as or better than they had to begin with, teeth that look great and work great too. Cosmetic and Implant dentistry is a separate world from engineering yet it’s not. I’ve been able to apply many of the theories I learned as an engineer to help my patients now” says Dr. Noie.

Dr. Farid Noie has assembled a top notch staff to provide the highest level of care and service for his patients. “I can do the best that I can do only when I have a capable team behind me. Our goal is to foster long term relationships with our patients and their loved ones. We treat our patients like family and strive to become like an extended family to them as well. We see them inside and outside of the practice as my staff and I live in the community. It is gratifying to provide our patients with the best care and quality of

work that we can, and see the difference that having a beautiful smile makes in their lives.”

Dr. Farid Noie is happy to provide his patients with same day emergency visits, a multi-lingual staff, and continues to make substantial investment in training his team to provide the highest level of care and service to his patients. He is also big on patient education. “The best thing we can do for my patients is not to fix a problem once they have it but to educate them about proper dental hygiene so the problem never occurs.”

Dr. Farid Noie graduated with honors from University of Texas Dental Branch at Houston with a Doctorate in Dental Surgery. He is a DIPLOMATE of International Congress of Oral Implantology as well as the FELLOW of Academy of General Dentistry, Associate FELLOW of American Academy of Implant Dentistry, and has completed his advanced training in Oral Implantology at New York Maxicourse in affiliation with New York University. Dr. Noie has graduated from the distinguished Misch International Implant Institute in affiliation with Temple University. He’s highly trained in advanced bone grafting and sinus lift, and ridge augmentation. He has completed advanced bone grafting training at Medical University of South Carolina as well as the prestigious Map Institute where he learned first hand in depth live surgical procedures for rehabilitating implant patients with poor quality bone, limited availability of bone, and other complicated cases. He has attended live advanced bone grafting training at Loma Linda University, advanced bone grafting and nerve repositioning procedures featuring hands-on Cadaver experience sponsored by the American Academy of Implant Dentistry at Wright State University School of Medicine in Dayton, Ohio. Dr. Farid Noie is Also trained and licensed to administer I.V. Sedation to help his patients

experience a pleasant and stress free procedure. Dr. Noie is also trained in orthodontics, Invisalign, and full mouth rehabilitation.

Dr. Noie is one of the very few dentists trained in both surgical placement and restoration of dental implants, enabling him to deliver comprehensive care to his patients from start to finish, all under one roof.
